

Space Line Basic Cable

The principle characteristics of the SPACE LINE cable systems are a subtle, airy appearance combined with great strength. Our cable system's purpose is to let only the merchandise stand out without themselves being obvious.

Our cables are made of galvanized steel, composed of 7 strands, each one composed of 7 wires, for a total of 49 steel wires twisted together. The cable thickness is 1/16" (approx. 1.6mm). Each cable can be loaded with up to 250-lb. (approx. 115-kg.). Stainless steel cables are also available for special applications.

Our basic cable, called "CC", is composed of parts C1 through C8 and is shipped assembled. Available in standard 10 or 13 foot lengths, or custom cut to order, our cable kits have a spring in the bottom anchor that applies tension to the cables for greater display stability. The tension of the cables can easily be adjusted by hand.

The lengths of the other systems, for wall or open area application, are indicated. Extra cable can be added to any cable system upon request.

All of the cable systems shown in this section must be anchored into a solid material or can be mounted on our aluminum track for mobility.

All the components are made from brass with a satin chrome finish. Other finishes such as polished chrome, satin or polished brass and black are made to order.
