

SECTION C-C SCALE 1 : 5

CONSTRUCTION

William Garvey shower trays are constructed from a laminated teak composite. The standard single tray is 800 x 800mm (31.5") and is available in a shallow (90mm) or deep (165mm) version. The grids are made of solid teak and are supported on rubber studs. All grids are designed to be removable, to facilitate cleaning. Large trays are supplied with a two part grid as shown.

The tray has a shaped base to improve drainage, but it should be levelled as accurately as possible. Large, non-standard trays require additional base supports which are supplied.

PLUMBING CONNECTIONS

The shallow (90) trays are fitted with a standard 1 1/2" chrome 'Easy Clean' waste compatible with standard shower traps. Waste plumbing connections are made below floor level.

The deep (165) tray is fitted with a combined shallow waste/trap system where waste plumbing has to run above floor level. This fitting is only recommended where a grid is supplied because the fitting projects above the surface of the tray.

In all cases, wastes are fitted in the centre of the tray.

CARE & MAINTENANCE

All William Garvey kitchen and bathroom products are polished with Timbertect, a resin based sealant which sinks into the timber and fuses with it, forming an exceptionally tough layer which will not absorb stains and which is easy to clean using ordinary non-abrasive bathroom and kitchen cleaners. Abrasive cleaners and products containing bleach should be avoided as they may lighten the timber unevenly. However, limescale removers can be used without the risk of damage.

STANDARD TRAY AND GRID

DIMENSIONS			
length		800mm	
width		800mm	31.5"
depth	shallow	90mm	3.5"
	deep	165mm	6.5"
wall thickness		34mm	1.3"
crated weight	with grid	28 kg	62 lbs
(deep tray)	without grid	22 kg	49 lbs

SHOWER TRAYS AND GRIDS CAN BE MADE TO INDIVIDUAL SIZES..... PLEASE CONTACT US TO DISCUSS YOUR REQUIREMENTS
